

3 Conclusion

In striving for eHealth – not only do we need to acknowledge the legacy technologies when new systems are to be designed and put to use. We also need to attend to the objectives and requirements of those working to achieve innovation – both those with a technical perspective and those with a health background. In supporting the harnessing of experience from both these groups, more comprehensive innovation involving ICTs may take place within the health sector.

Acknowledgments

I thank colleagues at NSEP and NTNU for their generous support, all of teaching staff, researchers and administration in making this multi-disciplinary program happen.
